Vision

Unmanned Systems Canada is a unified community of interests (industry, Governments and academia) working together to make Canada a recognized leader in unmanned systems research, development and use in civil, commercial and military applications.

Mission

To represent the interests of the unmanned vehicle systems community which includes industry, academia, government, military, and other interested persons.

To promote public awareness, education and appreciation for the Canadian unmanned vehicle systems community to itself, to Canadians and worldwide.

Goals

To provide a single voice for the Canadian unmanned systems community.

To promote and facilitate the growth of the Canadian unmanned vehicle systems community through education, advocacy, and exchange of ideas and technologies

To assist the Canadian unmanned vehicle systems community to achieve leadership in research, development, application, and operations.

THE ASSOCIATION

Unmanned Systems Canada is widely recognized as the focal point for identification of unmanned vehicle systems capabilities in Canada and is the only organization able to identify and support the needs of its Canadian members.

Unmanned Systems Canada is committed to delivering the best possible services for its members. Current Association activities and areas of outreach include:

- co-chair of the legal process for developing and adopting regulations to permit the operation of unmanned aircraft systems in Canadian airspace;
- partnering with Canadian government agencies to promote Canadian technology and industry;
- representing the needs and objectives of members on innovation, policy, program development and competitiveness;
- conducting industry outreach to educate the various civil sectors (energy, natural resources, etc) on the benefits of unmanned systems in their business fields;
- advocacy on behalf of our membership and their interests.

Unmanned Systems Canada encourages students and young engineers to get involved in unmanned systems through annual Student UAV Competitions, Student Papers Competition, and awarding of Scholarships to help young engineers interested in unmanned vehicle technology. Annually we recognize organizations and individuals who have contributed to the advancement of the UVS Sector.

MEMBER BENEFITS

There is a membership level in **Unmanned Systems Canada** to suit most situations – join as an individual for a nominal fee or as a corporation at a level to suit your requirements for access and exposure.

Individual membership provides access to the Members Section of the web site, newsletters, and magazines as well as discounted registration fees at Association events.

Based on their level of membership, Corporate Members may designate a number of representatives who have access to the benefits and features available to Individual members. In addition Corporations receive exposure on the Association web site, discounts on booth space, sponsorship opportunities and advertising at events and the opportunity to participate in, and benefit from, Association activities.

ANNUAL CONFERENCE

The annual **Unmanned Systems Canada** Conference and Exhibition has been held every year since 2003. As a National Conference the location moves around the country to expose national and provincial governments and organizations to UVS technology. Attendance at the annual conference has increased steadily over the years and now represents the second largest annual unmanned systems conference worldwide.

The main focus of this annual event is to bring together industry, government, military, and academia in a forum that promotes education and unsurpassed networking opportunities, or as we like to say “its purpose is to let people tell their stories”.

The **Unmanned Systems Canada** Conference is a truly international event with regular attendance from Canada, United States, Mexico, UK, Germany, France, Australia, South Africa, China, Korea, and a host of other countries. Over 75 presenters covering a wide range of UVS related subjects are combined with technical workshops and a growing exhibition area to make this a premier event on the Unmanned Systems calendar.

The **Unmanned Systems Canada** Conference is held in early November of each year in first class facilities in major cities across Canada. The facilities are chosen for their proximity to major airports and their ability to provide exhibition space, large plenary and breakout conference rooms and the excellent services and food quality that has come to be expected at **Unmanned Systems Canada** events.

Don't Miss these Premier Events
